

WhatsApp Bulk Sender Pro

Subscription & Payment Flow Architecture (3-Month & 6-Month Plans)

Executive Overview

This document outlines the user payment and quota management workflow for the WhatsApp Bulk Sender Pro browser extension. The system enforces subscription limits for **3-Month** and **6-Month** plans, providing a seamless UPI payment experience with direct WhatsApp owner activation.

Visual Payment & Renewal Flowchart

Subscription Plans & Quota Specifications

Plan Name	Validity	Price (INR)	Text Quota	Media Quota
Free Trial	14 Days	Free	50 Messages	10 Attachments
3-Month Plan	90 Days	₹749	5,000 Messages	1,000 Attachments
6-Month Plan	180 Days	₹1,299	12,000 Messages	3,000 Attachments

Detailed Step-by-Step User Journey

- **Step 1: Quota Interception:** When a user reaches their text or media message limit, campaign sending automatically pauses, and the glassmorphic Quota Exceeded Modal appears in the extension.
- **Step 2: Plan Selection & UPI Payment:** The user chooses between the 3-Month Plan (₹749) or 6-Month Plan (₹1,299). The modal displays your UPI QR Code and UPI ID for instant scan & pay using GPay, PhonePe, Paytm, or BHIM.
- **Step 3: UTR / Transaction ID Submission:** After making the payment, the user copies the 12-digit UTR transaction reference number from their payment app and inputs it into the extension field.
- **Step 4: Owner WhatsApp Notification:** Clicking 'Notify Owner via WhatsApp' opens a direct WhatsApp chat window to Mahesh Patgar with pre-formatted transaction details for verification.
- **Step 5: Admin Key Activation:** Upon payment verification, the owner provides an Activation License Key (e.g. MP6M-9876). Entering this key instantly refills the user's text and media quota.

Owner Administrative Control & Privacy

- **Zero Public Secrets:** All sensitive keys and payment validation tokens remain local or securely verified.
- **Owner Quick Activation:** An Owner Admin Drawer is built into the extension allowing manual top-ups.
- **Offline Persistence:** Quota status is securely stored in Chrome/Firefox local storage (`chrome.storage.local`).
