

WhatsApp Bulk Sender & Automation Engine

Complete Setup & User Guide for Another Laptop • Zero Installation Friction

■ **Purpose of This Guide:** Follow this document step-by-step to install, configure, and send WhatsApp campaigns on any Windows or Mac laptop. The extension runs locally inside Google Chrome with zero server setup, full dynamic field personalization, media attachments, and a 3-layer resilient engine that prevents breaking during WhatsApp Web updates.

1. Pre-requisites (Before You Start)

- **Google Chrome Browser** (or any Chromium browser like Brave, Edge, Opera).
- An active **WhatsApp Account** on a smartphone ready to scan the QR code.
- The extension package: **whatsapp-bulk-sender.zip**.
- Active Internet connection on both the laptop and phone.

2. Extract the Extension ZIP File

1. Copy **whatsapp-bulk-sender.zip** onto your friend's laptop (e.g. inside Documents).
2. **Right-click** the zip file and choose **Extract All...** (Windows) or double-click to unzip (Mac).
3. Confirm the folder contains: `manifest.json`, `popup.html`, `popup.js`, `content.js`, `selectors.json`, `xlsx.mini.min.js`, and `icons/`.

3. Install in Google Chrome (30-Second Setup)

1. Open **Google Chrome** on the laptop.
2. Type in address bar: **chrome://extensions** and press **Enter**.
3. In top-right corner, switch **Developer mode** toggle to **ON**.
4. In top-left corner, click the **Load unpacked** button.
5. Select the **extracted folder** (the folder where `manifest.json` is located) and click **Select Folder**.
6. **Pin to Toolbar:** Click the ■ **Puzzle icon** in Chrome's top-right toolbar, find *WhatsApp Bulk Sender*, and click the ■ **Pin** button so it is always 1-click accessible.

4. Connect WhatsApp Web

1. In Chrome, open a tab and go to: **https://web.whatsapp.com**
2. Open WhatsApp on phone → tap **Settings** (or 3 dots) → **Linked Devices** → **Link a Device**.
3. Scan the QR code on the laptop screen and wait until chats appear.

■■ **CRITICAL:** Keep this WhatsApp Web tab open at all times during sending. Do not close this tab.

5. Preparing Your Contact File (Excel / CSV / TXT / VCF)

The extension supports 4 contact file formats with automatic name & phone separation:

Format	Sample File Content / Columns	Best Used For
CSV / Excel (.csv, .xlsx)	Name, Phone, Company, Offer Mahesh, 919876543210, TechCorp, 20% Off Rahul, 919123456789, Prime Ltd, 15% Off	Standard multi-column campaigns with dynamic variables.
Plain Text (.txt)	Mahesh, 919876543210 Rahul Sharma, +91-9123456789	Fast copy-pasted number lists from notepad.
vCard (.vcf)	Direct smartphone contact export containing FN: and TEL: records.	Sending to exported phone address books.

■ **Phone Number Guidelines:** Always include the **Country Code** (e.g. 91 for India, 1 for US/Canada, 44 for UK). The extension's built-in sanitizer automatically strips spaces, dashes, parentheses, and + signs. **Example:** 919876543210. Even if a row has only a name, the search bar intelligently finds the chat!

6. Sending Campaigns (Step-by-Step)

1. Click the pinned **WhatsApp Bulk Sender** icon on Chrome's toolbar.
2. **Upload Contacts:** Click **Browse File** or drop your file. The badge will show: '✓ X loaded'.
3. **Dynamic Field Chips:** Click any chip (e.g. {name}, {company}) to insert personalized variables into your template.
4. **Craft Your Template:** Example: Hi {name}, your order from {company} is confirmed! Here is your tracking link: ...
5. **Attach Media (Optional):** Click **Attach Media** to attach photos (JPG/PNG), videos (MP4), PDFs, invoices, or catalogs. Live preview will appear.
6. **Safety Delay Pacing:** Keep Min Delay at **8s** and Max Delay at **15s** (keeps traffic human-like).

7. Testing Before Launch (Dry Run Mode vs. Live)

■ Safe Mode Test (Dry Run — 100% Risk Free):

1. Toggle the **Safe Mode / Dry Run** switch to **ON**.
2. Click **Start Bulk Sending**. The extension simulates the full process: parsing names, verifying clean contacts, calculating tags, and logging status. **Zero messages are sent to anyone's phone.**
3. Click **Export Results (.xlsx)** to review the simulation report.

■ Real Live Sending:

1. Toggle **Safe Mode / Dry Run** to **OFF**.
2. Test with **1 or 2 of your own phone numbers** first.
3. Click **Start Bulk Sending**. Watch WhatsApp Web automatically search, open chat, inject message & media, and dispatch!

8. WhatsApp Anti-Ban Best Practices & Account Safety

To keep your WhatsApp account in top standing with Meta, follow these industry safety rules:

Safety Rule	Recommended Setting / Action	Why It Protects Your Account
Pacing Delays	Keep Min Delay at 8s and Max Delay at 15s+ .	Simulates natural human typing, preventing rate-limit bot triggers.
Personalization	Always insert {name} in your message.	Ensures every dispatched message is unique and not detected as broadcast spam.
Daily Volume	Warm up: 50–100/day for new accounts; 200–500/day for established accounts.	Gradual ramps avoid sudden abnormal behavioral traffic spikes.
Opt-In Audience	Send to existing customers, leads, inquiries, and opt-in lists.	Drastically reduces recipient 'Report Spam' or 'Block' button clicks.

9. Troubleshooting & Frequently Asked Questions

Q: The extension says 'Please ensure WhatsApp Web is logged in and active'. What should I do?

A: Open <https://web.whatsapp.com> in another tab in the same Chrome window. Ensure your chats are loaded.

Q: What happens if WhatsApp updates its website layout or buttons?

A: Nothing will break! The extension has a 3-layer defense system: 9 built-in fallbacks, an automated in-browser heuristic scanner that detects button icons & positions on screen, and daily automated cloud canary health checks.

Q: Can I stop a campaign while it is sending?

A: Yes. Click the red **Stop Sending** button anytime. It finishes the active message cleanly, stops the rest, and allows you to download an Excel delivery report.

Q: How do I export delivery reports?

A: After sending finishes (or is stopped), click **Export Delivery Report (.xlsx)**. You'll get an Excel sheet with Contact Name, Phone, Delivery Status, Method, and Timestamp.

■ Setup Complete & Ready: Your friend's laptop is now completely configured! All automation happens directly on their machine with zero cloud server costs, maximum privacy, and automated resilience.
